Jean Luc BIAH

Tech Lead .NET & React / Technical Project Manager — Finance and Insurance

Freelance Tech Lead with 20 years of experience in banking and insurance. I lead teams and financial and actuarial computing applications (ALM, AFM, HPC), design their architecture and industrialise their delivery (CI/CD, automated deployment). I modernise legacy applications (WinForms, WPF, VB) to .NET Core and React. I build generative AI (Anthropic API, coding agents) into my products and team practices.

Paris area, France · Contract (régie), on site or hybrid · Available within 3 months (notice period)

jeanlucbiah.pro@outlook.com · www.jeanlucbiah.com · LinkedIn · GitHub

SKILLS

Area	Technologies
Back end	C#, .NET 8 / .NET Core, ASP.NET Core, ASP.NET MVC, Windows Services, Node.js / Express, Python / FastAPI, REST APIs, SignalR, WCF, RabbitMQ
Front end	React, Next.js, React Native / Expo, JavaScript, Vue.js, Blazor (WebAssembly), WPF, Tailwind CSS
Data	SQL Server, PostgreSQL, Oracle, MongoDB, T-SQL, PL/SQL, SSIS, SSAS, SSRS, Dapper, Entity Framework
DevOps and cloud	PowerShell, IIS, NuGet, Artifactory, GitLab CI, Azure, Docker, Kubernetes, Ansible, Jenkins, TeamCity, Octopus, Vercel, Railway
Quality and observability	NUnit, Moq, TDD, SonarQube, Datadog, Kibana, Graylog, Sentry
Financial computing	ALM and AFM computing grids, MS HPC, distributed computing orchestration (HpcLite), DAG dependencies, real-time job monitoring
AI	LLM integration (Anthropic API, OpenAI), AI-driven automation
Methods	Scrum, Kanban, Epic / Feature / User Story backlog, Jira, Software Craftsmanship, SOLID, design patterns (GoF), UML

Business domains: life insurance and ALM, actuarial science, Forex, counterparty risk, guarantees and sureties, Solvency II, US Treasury bonds.

EXPERIENCE

Sogecap (Société Générale Insurance), Paris — Application Officer, Technical Project Manager / Tech Lead (employee)

Since 03/2021

Applications that launch and monitor actuarial (ALM) computations, used by actuaries. Agile team of 7, including 3 front-end developers under my lead.

Computing platform migration (2026), led as Application Officer — POC approved, development nearly complete

- Designed **HpcLite**, a .NET 8 orchestration layer that reproduces the logic of Microsoft HPC (scheduler, agents and runners as Windows Services) and submits tasks to the Group's internal computing grid.
- Built the POC back end in .NET 8 / Dapper: REST API, job dependencies as a graph (DAG), state machine, crash detection, safe concurrent dispatch on PostgreSQL (`SKIP LOCKED`), integrated with the existing data model.
- Applied least privilege (agents without database access) and documented the target architecture; code skeletons generated with Claude Code from iterative specifications.
- Built the POC front end (HTML, CSS, JavaScript): submission interface, real-time monitoring of computation progress and logs, IndexedDB cache and client-side optimisations, on a design system shared by two applications.
- Beforehand, an exploratory POC in Node.js / Sequelize, which became the sister application whose design system was reused.
- Set up agile delivery: Epic → Feature → User Story backlog, sprints tracked as GitLab milestones, standard Jira ticket template (context, deliverables, acceptance criteria); led the web migration workstream (project plan, demos, acceptance testing, releases).
- Automated end-to-end deployment in PowerShell (Artifactory → IIS and Windows Services, pre-flight checks, rollback), validated through 19 milestones and 167 test scenarios up to production; scripts and documentation handed over to the operations team.
- In progress: GitLab CI/CD for a .NET team not covered by the Group's DevOps platform (Java only). Build script review: removed a hard-coded secret and false-success publications.

Redesign of the ALM computation launcher

- Supervised the redesign of the WPF application as a React web application (forms, data tables, dashboards): task breakdown, code reviews, mentoring; maintenance of the WPF version.
- Re-architecture of the solution (GoF, SOLID, Software Craftsmanship); unit tests (NUnit, Moq) with code coverage tracked in SonarQube.
- Scrum delivery and single point of contact for actuaries, software vendors (bugs, licences) and IT (DevOps, servers, HPC).

Stack: C#, .NET 8, ASP.NET Core, Kestrel, Windows Services, Dapper, PostgreSQL, HTML/CSS/JS, IndexedDB, React, Node.js, Sequelize, MVC, WPF, PowerShell, IIS, NuGet, Artifactory, GitLab, Jira, Jenkins, Ansible, Kubernetes, MS HPC, Claude Code

Les Rappelés, Tallinn (Estonia) — Lead Developer (side project)

03/2025 – 08/2025

Design and delivery of the Lissen platform, from the mobile app to the back end.

- Expo / React Native mobile app published on Google Play.
- Next.js / React website deployed on Vercel.
- “Forge” back end in Node.js / Express (REST API) on Railway.
- Vercel and Railway CI/CD, crash and performance monitoring (Sentry, Crashlytics).
- AI-driven automation and assistance (Anthropic API, OpenAI).

Stack: React Native, Expo, Next.js, Node.js, Express, PostgreSQL, IndexedDB, GitHub

Ektare Immo, Nairobi (Kenya) — Project Manager (side project)

06/2023 – 12/2023

Design and delivery of a property management application for the Kenyan diaspora, with a team of 6.

- Solution design (front end, middle office, back end) and implementation of the middle office and back end.
- MongoDB database and REST API (OpenAPI, Controller / Service / Repository architecture).
- React application for the middle office, showcase website hektare-immo.com (HTML5, CSS3, jQuery).
- Team delivery with Scrum / Kanban.

Stack: React, Node.js, Express, MongoDB, REST API, Git, GitHub

Binas Group, Brussels — Technical Project Manager

11/2020 – 01/2021

Greenfield development of a contact management PDM, with a team of 3.

- Solution architecture, SQL Server database and Dapper ORM.
- .NET Core API hosted on Azure, WPF client (Caliburn Micro).

Sinequanone Institute, Bezons — Master’s degree trainer (M1 and M2)

Since 08/2020

Training work-study students in full-stack development, Software Craftsmanship, DevOps (CI/CD) and agile project management. Two platforms delivered: invoicing (MongoDB, Node.js, React, Stripe, Docker) and apprenticeship contracts (Vue.js, Sequelize).

Betclic Group, Bordeaux — Tech Lead

11/2019 – 10/2020

Tech Lead of a group of 4 within a team of 20, redesigning Windows services and REST APIs.

- API receiving real-time match messages from brokers (RabbitMQ).
- Stored procedures, Dapper ORM, Datadog and Kibana monitoring.
- Code reviews and production releases (TeamCity, Jenkins, Octopus).

Société Générale CIB, La Défense — Lead Developer

01/2019 – 09/2019

Maintenance of XOne (Forex Cash): unit test overhaul (NUnit, Moq), PL/SQL procedures on Oracle.

AG Insurance, Brussels — Lead Developer

08/2017 – 08/2018

Evolution of a web application that drives computations on an AFM grid and replaces an Excel tool. WCF back end, ASP.NET MVC screens.

Candriam Investors Group, Paris — Lead Developer / Architect

11/2016 – 03/2017

Migration of VB and VB.NET batches to C# .NET 4: application inventory, dependency analysis, KPIs, test-driven development.

CEGC (BPCE Group), La Défense — Lead Developer

10/2014 – 10/2016

Evolutions of the guarantee and surety management application (ASP.NET, WinForms, WCF, SSRS): technical specifications, architecture, packaging and acceptance testing. Performance audit for BPCE in 07/2014.

Earlier engagements (2006 – 2014)

- **Banque de France** (2013 – 2014): VSTO Lead Developer on Solvency II, ASP.NET MVC and SSIS.
- **Crédit Agricole CIB** (2011 – 2012): counterparty risk reporting (VaR, P&L, stress), SSIS and SSAS.
- **Société Générale CIB** (2010 – 2011): market connectivity (Tradeweb, Bloomberg) for US Treasury bonds, Scrum pilot project.
- **Natixis** (2009 – 2010): financial product trading applications.
- **Itron, Newedge, C-Design Fashion** (2006 – 2009): industrial software, database administration, PDM.

GENERATIVE AI

I use generative AI at two levels: in the products I build, and in the way I develop.

Fluxo — personal finance management application (2026)

- Full-stack application designed and delivered on my own: dual-currency budgeting (EUR / XAF), September-to-August fiscal year, bank statement import and reconciliation (CSV, OFX), recurring payments, debts, savings, dashboards, mobile PWA.
- AI financial advisor on the Claude API: streamed answers (SSE), with a system prompt automatically fed with the user's financial context (income, expenses, disposable income, debts, tight months).
- Prototype removed after evaluation: the value delivered did not justify the API cost. A product decision, not a technical one.
- Built with Claude Code: back-end and front-end foundation (100+ files) up and running in two days, driven by context documentation for the agent (CLAUDE.md, CONTEXT.md) and a development sequence log.
- Stack: Next.js 14 (TypeScript, shadcn/ui, Recharts), FastAPI (Python), SQLAlchemy 2, PostgreSQL 16 (dedicated schema, views, triggers), NextAuth, GitHub Actions CI/CD to Railway and Vercel.

Lissen (2025) — automation and AI assistance built into the platform (Anthropic API, OpenAI).

Agent-assisted development — Claude Code and GitHub Copilot every day, governed by project rules (CLAUDE.md): SOLID principles enforced, no SQL execution without approval.

INDEPENDENT WORK THROUGH CYRANO CONSEIL

Projects designed and delivered as an independent, alongside client engagements.

Project	Type	What I delivered
Lissen	Mobile + web	Spiritual-life app built with Expo / React Native and published on Google Play, plus Lissen Forge, a web back office for content and user management
Lyngwa	API	Data API on countries, cities and islands worldwide, filterable by name, ISO code and currency
Trello Scraper	API	Trello data extraction API: boards, lists, cards, members
Law For All	Website	Legal information platform for the general public
Dream Logistics	Website	Website of a regional training academy for logistics professions
Ektare	Website	Real estate company website with automated project tracking
Nzuane	Website	Website of a children's aid charity (Ebolowa, Cameroon)
AutoStock	E-commerce	Online store for car, motorcycle and truck spare parts

EDUCATION AND LANGUAGES

- **Ingesup, Paris** — Engineering degree in information systems and software engineering, 2007
- **Institut Africain d'Informatique, Libreville** — Analyst-programmer, 2003
- **Languages** — French and English, fluent
